DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed over the prior art of record US Patent No. 6,215,570 to Ellis et al., because the prior art of record does not teach or disclose an all-optical time division multiplexing system, comprising:

a) first divider having first input and a first plurality of outputs for receiving input signals at said first input and directing said input signals to each of said outputs of said first plurality of outputs, said input signals arranged within periodic time slots;

b) second divider having second input and a second plurality of outputs for receiving clock signals at said second input and directing said clock signals to each of said outputs of said second plurality of outputs, and

c) a third plurality of AND gates each having third and fourth inputs and fifth output for receiving said input signals at said third input from one of the outputs of said first plurality of outputs and receiving said clock signals at said fourth input from one of the outputs of said second plurality of outputs, and

d) said clock signals and said input signals coincide in said third and fourth inputs of the AND gates of said third plurality of AND gates in a consecutive order to produce at said fifth output images of said input signals such that only one AND gate of said

third plurality of AND gates produces at said fifth output one image of one of said input signals at each time slots and in a consecutive cyclic order.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. LoCascio et al (US Patent No. 7,095,959) is cited to show optical time division multiplexing/demultiplexing system.
